

Acknowledgements

Over the years, I have had the good fortune of teaching at a multitude of different institutions. Besides my current employer, the University of Auckland, I have taught at Rutgers University, Indiana University-Purdue University at Indianapolis (IUPUI), Washington State University, Wellesley College, and Harvard Kennedy School. I have taught large lectures with upwards of five-hundred students at one time and small, intimate lectures of less than thirty, where I knew every student by name. I have also taught mini courses in a variety of places including my alma mater Presidency College (now Presidency University), Indian Institute of Management, Kolkata and during two wonderful summers at the University of Munich. All these teaching stints presented enormous learning opportunities and I am deeply thankful to the people who made this possible.

While much of the world tends to fixate on institutions in Northern America and Europe, there are plenty of excellent universities in Australasia that rank with the best of the world. The University of Auckland is one such institution. It is a leading research institution, which over the years has provided excellent support to my research and teaching endeavours including providing regular sabbaticals that allowed me to engage in uninterrupted thinking and writing. I am always grateful for this support. Moving to Auckland from the USA was a bold move but now two decades and two daughters later, I take great pleasure in calling this small slice of paradise in the South Pacific, home.

In a sense, I have been preparing for more than twenty years to write this book. The seeds of this book have been germinating in my mind all these years while I got involved in writing other books and academic papers. I first became involved in teaching principles of economics as a teaching assistant for Gary Gigliotti at Rutgers. Gary was a highly regarded teacher and working as Gary's apprentice served me well once I started teaching on my own while still at Rutgers and then eventually embarked on my own academic career. It is safe to say that I learned the art of teaching large lectures from Gary. Thomas Prusa, Barry Sopher, and Ira Gang also served as good mentors. Though he does not teach first year courses, I learned a lot about how to present complex material in simple terms from Richard McLean. At Wellesley College, I had the good fortune of hanging out with and receiving insights from the late Karl (Chip) Case, the author, with Ray Fair, of one of the more popular textbooks in economic principles.

I owe a special debt of gratitude to my colleagues at the University of Auckland who have worked with me in designing and/or teaching introductory courses over the years. I have learned from them and at the same time they have acted as sounding boards as I tried out my ideas. This group includes Mike Anstis, Debasis Bandyopadhyay, Geoff Brooke, Alexandre Dmitriev, Xiuming (Audrey) Dong, Tony Endres, Tim Hazledine, Gamini Jayasuriya, Annette Lazonby,

Mark Millin, Steffen Lippert, Steve Poletti, Alan Rogers, Matthew Ryan, John Small, Olga Sudareva, James Tremewan, Rhema Vaithianathan and Xingang Wang.

Haiping Zhang has contributed to this book in multiple ways. We worked together in updating the material for the course “Understanding the Global Economy” and to adapt this material for another course called “Economics, Markets, and the Law”. My conversations with Haiping helped immensely in thinking through my arguments and the best way to present them. Both Haiping and Asha Sundaram were kind enough to read over multiple chapters and provide feedback. Ryan Greenaway-McGrevy has influenced my thinking on a range of issues via long and involved conversations. He also read over and provided feedback on multiple chapters. Dulani Jayasuriya and Boa Athu were an enormous help in teaching me about cryptocurrencies and Central Bank Digital Currencies.

Jessie Zhang provided enormous support in putting together the figures and the question bank culling material from courses taught over many years. Ishannita and Ananrita Chaudhuri helped with various aspects of checking the manuscript and providing feedback. Sanket Sen diligently checked the answers to all the questions. I am grateful to Michelle Gallagher and Chloe Herbert for shepherding this project through to completion. I am also indebted to anonymous reviewers whose feedback helped improve the exposition as well as the copy editor, [REDACTED] and the production manager [REDACTED]. I have had a long and productive collaboration with Routledge for many years now with three books including this one (along with translations in other languages) and hopefully more to come. I would like to acknowledge the two people who have been instrumental in my long association with the company, Rob Langham, who published my first book, “Experiments in Economics: Playing Fair with Money” and Andy Humphries, who facilitated the second one, “Behavioural Economics and Experiments”.

Of course, at the end of it all, as we say in all our academic papers, I alone am responsible for any errors that may appear in the following pages. Feel free to write and tell me if you do not agree with something I have said or if you have counterexamples. Also feel free to let me know if you know of other applications or anecdotes that might be relevant. I hope I have managed to convey some of the passion and excitement that characterizes the study of economics and I hope you enjoy reading the book. You can find out more about my research, my books, and other activities on my website: <https://ananishchaudhuri.com>.
